A Movement in Context

A movement can change with its purpose, objects, space, timing and people. Describe a task as it happens in context, rather than treating it as one isolated action.

WORKED EXAMPLE

Imagine carrying a bag from a shop to a table. A second version uses stairs, a narrow doorway and a deadline. The object may be unchanged, but the situation is not.

Four questions to carry into practice

01 What task and goal?

Name where the action starts, ends, and why it is being done.

02 Which object and route?

Describe the object, surfaces, supports and turning points.

03 What about time and other people?

Include deadlines, crowds, companions or helpers if relevant.

04 Which one condition would you change?

Compare one modest alternative and state what is still unknown.

Movement maps are learning tools, not clinical assessments or individualized exercise prescriptions.

A Movement in Context — Practice Sheet

Use a fictional or non-identifiable example. Your answers remain on your own sheet; Aetherion does not collect this page.

1. What task and goal?

2. Which object and route?

3. What about time and other people?

4. Which one condition would you change?
